Satan's Black Book of Linux
By: Scott A. Barry

Satan's Black Book of Linux – Table of contents.

2.
It's more Secure.

The first reason why is not so many people make malware and malicious software in general for it. There has only been about 48-50 known viruses that spread on your computer in Linux and since it is open source it is constantly patched and updated with the latest kernel update on your distro you are guaranteed to be safe from a virus or malware. There are 36,000 viruses every day found for Windows. Also Windows doesn't really do anything about them. A Linux kernel update is what you need to stay safe on the computer. Windows is basically backdoored and screwed and also has some government BS and NSA BS. Winfows has access control and Linux has Sudo and SE-Linux which are more strict than access control and better than Windows Security in general. Aparmor combines individual programs to a set of listed files whilst SE-Linux has DOD style access controls. Both Aparmor and SE-Linux are included in different Linux Distros. Lightweight Portable Security is created by the DOD and comes with SE-Linux. SE-Linux needs to be disabled to use aparmor. Aparmor comes out of the box on ubuntu. LSM is also another thing with Name Based access controls. What they do is describe how a program is going to interact with another program. It provides a more secure environment so everything runs isolated. With Linux there are still browser exploits just like Windows so be aware of that and maybe if you want the best security use a Live USB of an update Distro such as Manjaro. You see Windows just doesn't want to patch because they get paid off by AV companies and get loads of profit that way. Most people when their computer gets all bundled up and they are rich, they just get a new 500 dollar computer. If you want to do something for Windows maliciously there's an app already made for that. And With Linux. You need to gain root and you need to bypass the very strict access controls built into Linux. Linux is easy to use and so is Debian. That is all.

3.

IT'S FUCKIN FREE NO MONEY REQUIRED FUCK THE CORPORATE WORLD FUCK ISREAL.

4. BILL GATES IS AN ASSHOLE WHO WANTS US TECHNOLOGICALLY IN THE DARK AGES AND IS A GLOBALIST AND WANTS THE CHENG RING CIRCUMCISIONS AND VACCINES AND AUTISM AND HIS OS WINDOWS IS BACKDOORED.

5. True Permissions.

Sudo -i

su root

su user

password

sudo passwd user

sudo passwd root

new

new

sudo thunar/nautilus/pcmanfm/other file manager

6. Openssl.

#Use it you fuckwit.

This three ring shit show is called local file encryption you #fuckwit.
using drive encryption with LUKS-crypt in gnome-disks.

```
bash d file.ext
for i in $(echo "$1"); do echo $i
done
openssl aes-256-cbc -e -a -d -in $i -out $i.d

bash e file.ext
for i in $(echo "$1"); do echo $i
done
openssl aes-256-cbc -e -a -in $i -out $i.cr

bash key
dd if=/dev/urandom of=0 bs=1000 count=1
echo "Use 20 characters of this. Maybe write it down. Maybe put it on a labeler
then put it on a card."
cat 0 | md5sum

bash r file
shred -vzn 5 $1 rm $1

sudo apt-get update

sudo apt-get install gnome-disks

sudo gnome-disks

create lvm encrypted LUKS filesystem and secure your shit.

Then upload the shit to mega.nz.
```

7. Calculator of Choice

Terminal>> bc -l

a(1)*4 = Pi

8. Can encode things as base64 and work with shellcode.

Shellcode

```
echo -ne "\x90\x90\x90\x41\x41\x41\" && echo "abcdefghijklmnopqrstuvwxyz0123456789" >>file.txt
```

```
echo "text" | base64 >>encoded.txt
```

```
base64 encoded.txt
```

```
base64 - -decode encoded.txt
echo "<base64>" | base64 - -decode
```

```
cat file.txt | base64 - - decode
```

9. Knowing the terminal and knowing to type sudo thunar sudo leafpad/mousepad/gedit is a must for Linux Users.

Sudo apt-get update

sudo apt-get install package

google how to install in Linux.

Google how to do it.

10. If you are a Targeted Individual this will stop the hacking CNO and coercive gang stalking. Scalar and DEW attacks still hit you physically if you don't detox so drink distilled water and that is all.

11. The AV companies just give Money to Microsoft, they make rogue software too and make viruses as well. The Tech Company SOPHOS told a straight out lie about LINUX SECURITY. Don't trust SOPHOS.

12. No need to install rogue, fake, junk, crapware PCMatic, Just use Linux. LINUX IS THE SHIT. Tell Robert Cheng you are running Linux and your computer is running fine.

13. That's right Less Disk Usage, Less Ram Usage, Less CPU usage, Much Much better.

14. It uses less resources and can run as a server for days on end or you could even run your own pirate radio station. Great.

15. Many linux distros are customizable and you can even make your own with compiz, 300 workspaces, and a cube desktop thing. WEEEEEEEE!!!!!

16. Discreete Linux is 64 Bit and protects against Bad USB. That's all I have to say.

17. Governments run Linux and The Soviet Union Runs Astra Linux.

18. If you are Looking for a distro that is not made by elitist assholes you gotta try Gnewsense/GNU or Manjaro/Linux.

19. Distros such as Knoppix 7.6 come with Adblock and Noscript pre-intstalled. Also on Archive.org

mrfaildeveloper-software-pack

Set of Free Open Source Linux Distros. Set of Free Open Source Linux Distros. KNOPPIX 7.6.0 32 Bit iso.

https://sourceforge.net/projects/knoppix-mirror/files/knoppix-dvd/KNOPPIX_V7.6.0DVD-2015-11-21-EN.iso/download Manjaro XFCE 17.0 i386 32 Bit iso. Google.com -- parent directory index of Manjaro XFCE 17.0 iso

GX2oHYf9FD2EGErNJoAxkiaWP6FAoDsNVo9B3MiV0tY link: https://mega.nz/#!duYzWRpI!GX2oHYf9FD2EGErNJoAxkiaWP6FAoDsNVo9B3MiV0tY

20. I keep the old versions because the industry is a dick. You know less overhead just runs better anyways. Especially with Linux and GNU.

21. Less overhead means better computing. Gotta keep the Ram and CPU usage nice and low if you want to work and browse the web.

22. Linus Travolds and Richard Stallman are more ethical, The corporate shills are just there to sell restricted evil software.

23.

When it's live there is no need to reinstall due to malware. Also just less likely to get malware.

24. It's fully open source so you can view the code, modify the code and assure it is safe to use. You can also modify the code to fix bugs in said software. Those are all the freedoms you need. Satan Loves that. You can even improve the software by modifying the code. Hence it is open source.

25. wget -r - - no parent
<url>(ftp)(http)(https)
 curl fileurl/1.iso -O /dev/sd(x)
 sudo fdisk -l
 sudo gparted

 I got electronic harassment
 I am a victim of Gang Stalking
 aplay /dev/urandom <there u go
 TI scatter Frequency built in
Linux.

26. On some distros in order to fuck things up you must type su or sudo. There you go.

27. Palemoon and Iceweasel are open source, Firefox is proprietary, so use distros that come with Iceweasel. Like Knoppix 7.6. on an older IBM T60 Laptop. I downgrade to avoid the iseries spy crap. Fuck Spy UEFI and SPY CPU's. I'm oldschool. That's how I roll. Bitch.

28. Snowden uses Linux and is now using better more secure distros of Linux. There you go. Snowden is a Hero so is Richard Stallman and Linus Travolds. So is Julian Assange. They are all heros. Fuck Obama. Eat shit Obama. Oh, and fuck you Bill Gates. All Bill Gates wants is Globalism and world domination.

29. Andriod OS is a Backdoored Linux Distro. Switch to Manjaro Linux and avoid that crap. Do it.

30. A corporation is a crime syndicate so avoid these backdoored platforms and use other Stable/Secure Linux Distros and Flavors of FreeBSD and GNU.
Avoid These:
Windows, Andriod, Blackberry, and Mac OS, iOS, Crapple, Microshaft anything. Xbox Crap Thing.

31. A new product called purism website is puri.sm and better than google/andriod. If poor still stuck with android though. Sucks to be poor.

32. Freedns.zone , openssl, mega.nz, and hide all your shit with lvm drive encryption. Do it for better peace of mind and get away from the government that fucks you over.

When you install say Manjaro you can set up LVM drive encryption so do it to lock that computer away from the GOV. Use a strong long completely random alphanumeric password. DO IT. Case sensitive upper case lower case special characters diacritics do it all. Fuck it. 187. KIKE!!!!!

33. Are you a victim of Gang Stalking? Are you a Targeted Individual?

aplay /dev/urandom << WN for Targeted Individuals. DO IT

528 sacred healing frequency in Linux Restore/Restructure and Cleanse Water.

#bash 528.sh
